Saguaro Cactus is native to the **Sonoran Desert** in Arizona; the blossom is the state wildflower.

The **Fan Shape** refers to the **Crested Saguaro**.

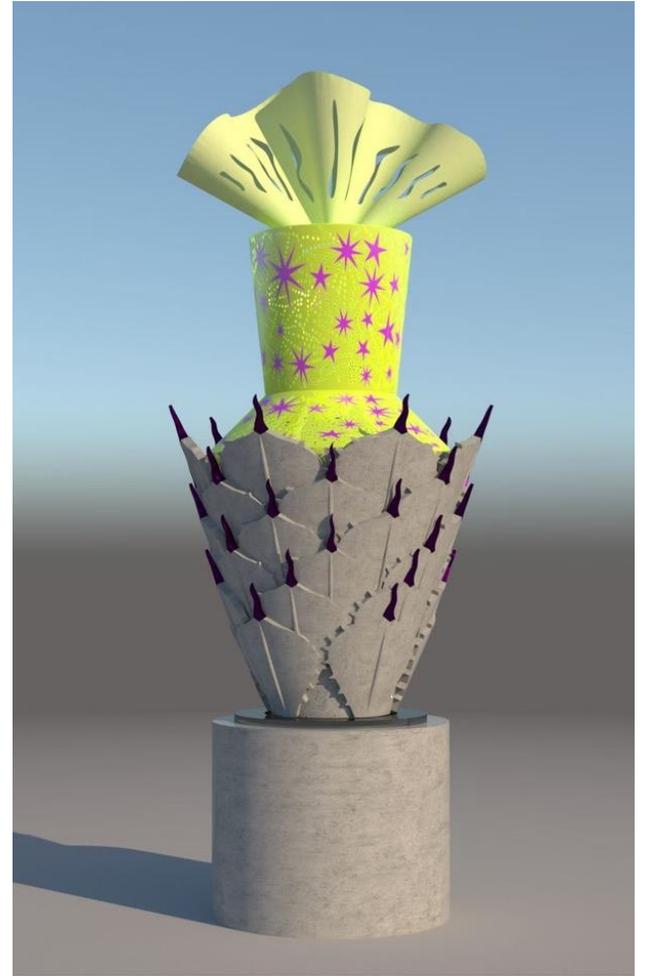

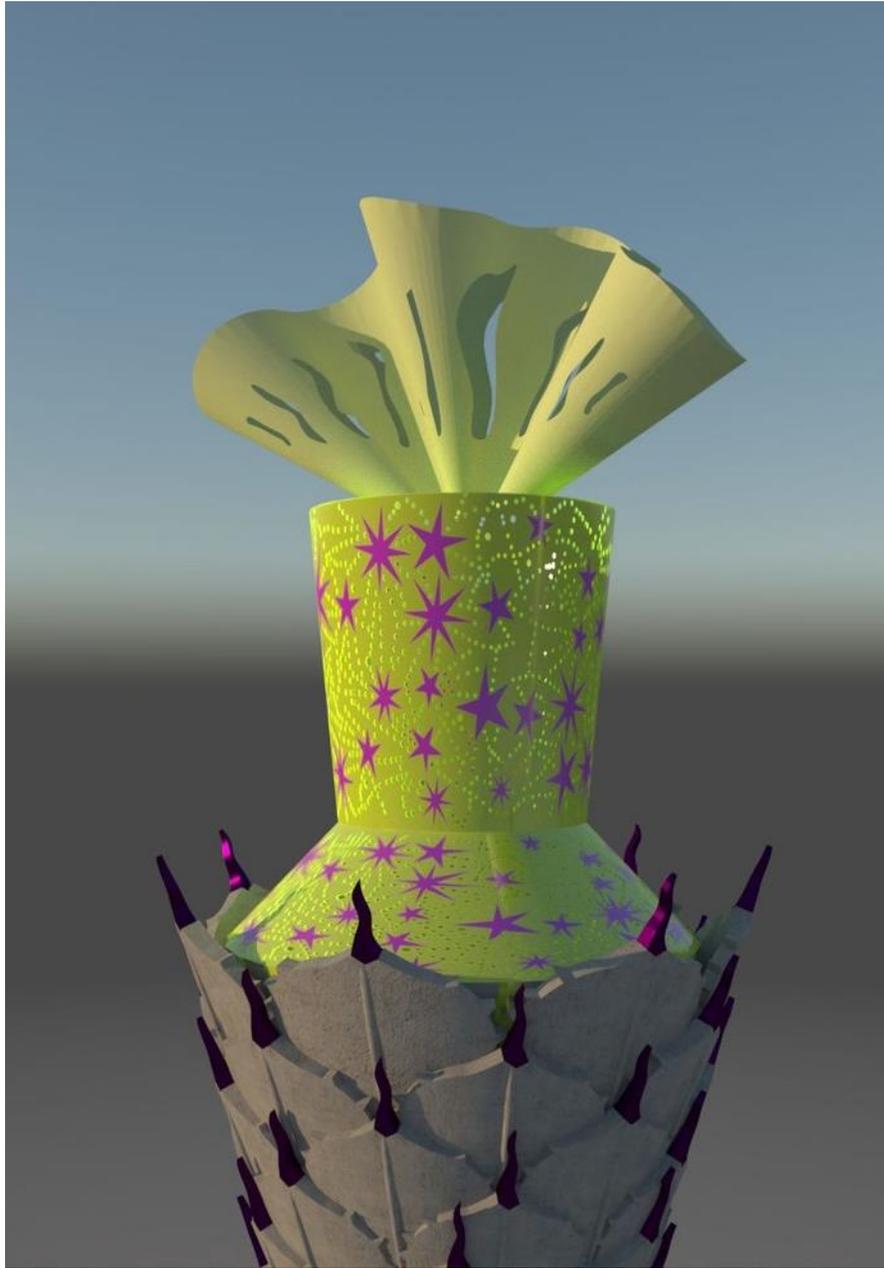

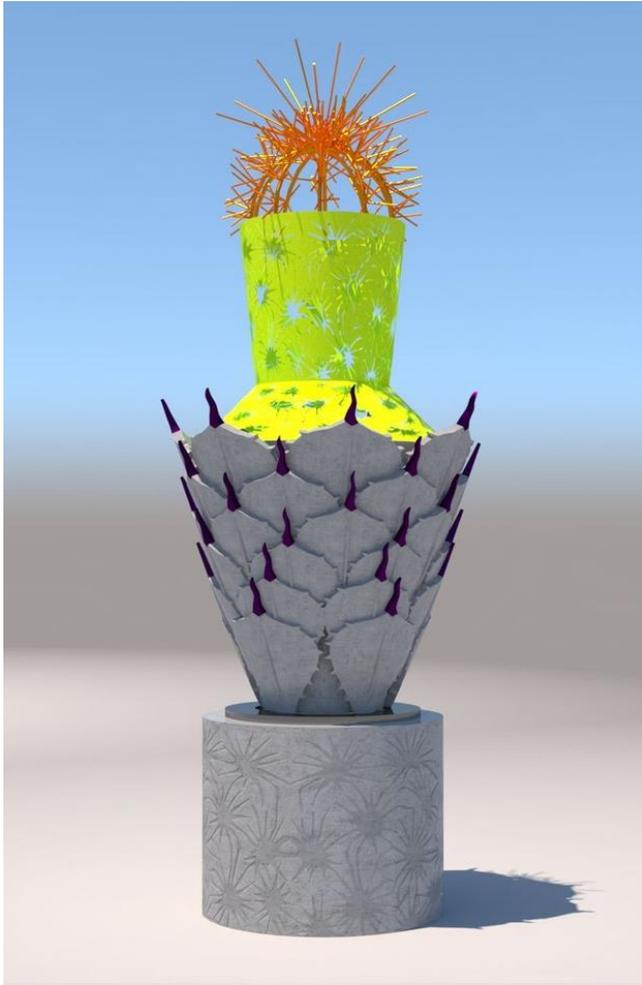

Certain **Agave Plants** are native to the Sonoran Desert in Arizona. The leaves are tightly compacted in the growing tip and leave teeth imprints on the surfaces of adjacent leaves after the leaves unfurl. The leaves are lined with sharp spines (or teeth) with a hard, sharp spine at the tip.

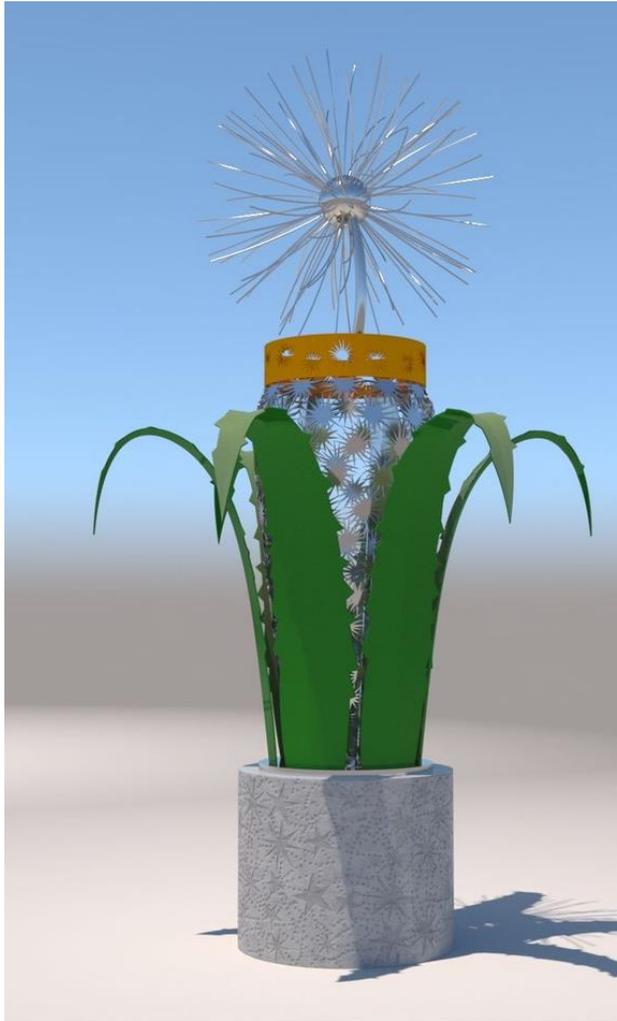

Calliandra Eriophylla or **Fairy Duster** is native to the deserts and grasslands of the Sonoran Desert region. The flower attracts butterflies and is pollinated by hummingbirds.

The **Barrel Cactus** has spines that resemble stars. The areoles spiral around the cactus and line up diagonally.
